

## Measuring Guidelines and Instructions

It is advised to have someone else take your measurements to get the best possible results.

It is best to wear only under garments or form-fitting clothing when taking measurements.

When getting your measurements taken you should stand with eyes straight ahead and with your arms relaxed at the side. Shoulders should be relaxed and the back should be straight. We don't typically stand like this all of the time but we need to start with the best possible base to get your suit to fit you comfortably.

When measuring pull the tape snug, but not so tight it squeezes the body.

These measurements require someone to measure your body horizontally across or around your body. Be sure that the tape is always parallel to the ground when taking horizontal measurements and is never offset or sagging.

---

Please fill out the entire measurement form, including the upper right area where we ask for your height, weight, build and suit fitment preferences. This information is very important as we build you the best possible fitting suit. If you do not supply us with all of this information it will delay your order.

---

- 1) **Chest Circumference:** Circumference around the fullest part of your chest, typically just under your armpit.
- 2) **Waist Circumference:** Where you want the waistband to fall on your suit.
- 3) **Hip Circumference:** Circumference around the fullest part of your hip.
- 4) **Thigh Circumference:** Circumference around your thigh 4" below the crotch seam.
- 5) **Calf Circumference:** Circumference around the fullest part of your calf.
- 6) **Neck Circumference:** Circumference around the base of the neck, making sure the tape is slightly loose and not restrictive on the neck.
- 7) **Back Shoulder:** Measure across the back of shoulders from the edge of your left shoulder bone to your right. Keep the tape horizontal to the ground and measure straight across the back, not up and over the shoulders.
- 8) **Inseam:** Measure from the crotch seam to the floor. Be sure to accurately find the body crotch, not the seam of any baggy clothing.
- 9) **Outseam:** Measure from where you want you pants to sit, and measure to the floor.
- 10) **Pant Rise:** Measure at desired waistband location, front belt, under crotch, and to back belt.
- 11) **Forearm Circumference:** Circumference around the fullest part of your forearm.
- 12) **Straight Arm Length:** Relax the arm and let it hang straight down to your side, and measure the length of the arm from where the shoulder and arm meet down to the wrist.
- 13) **Bicep Circumference:** Circumference around the fullest part of your bicep.
- 14) **Back Length:** Measure from the base of the neck to the desired jacket length (or a t-shirt collar to seam).

All measurements should be in inches.
